All-In-One Solution
For Using Medical Services

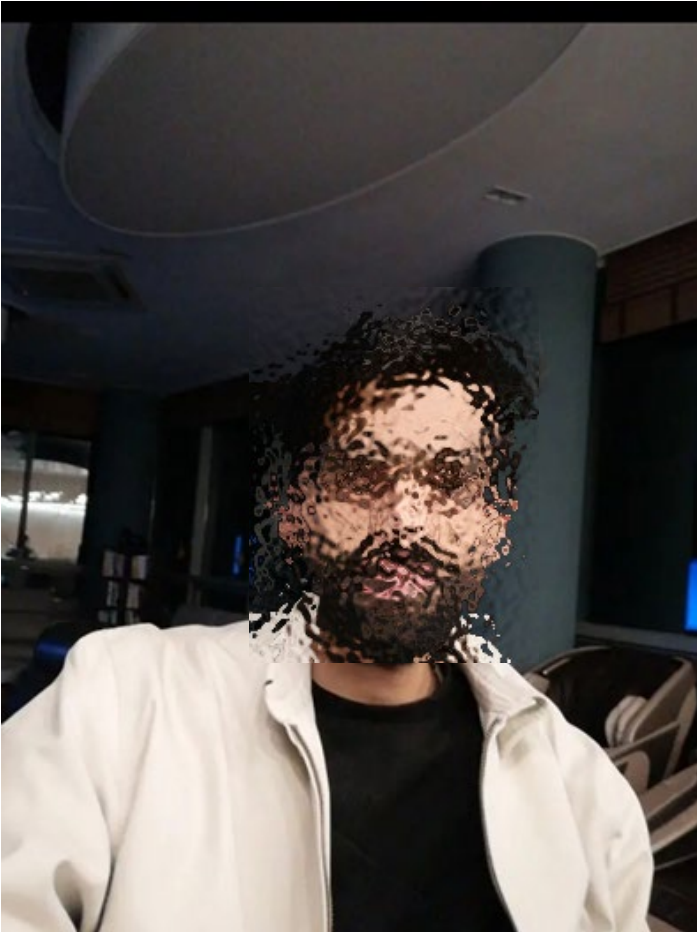

Interview with KISA (Kaist International Student Association)

KISA

Q. (For international students) Have you experienced any difficulties when using medical facilities in Korea?

Ash****-President of KISA ㉠

1. Lack of medical information

"I tore a ligament while playing soccer and wanted to see a specialist, but it was difficult to find a hospital with an orthopedic specialist."

"One time, I needed to go to the emergency room, but since I didn't know where the nearest one was, I ended up going all the way to Seon Hospital in Daejeon instead of the one in Yuseong."

2. Difficulty in communicating

"I take a Korean friend with me when I go to a big hospital to help with the complicated paperwork and communication. However, if my friends are busy, I can't go to the hospital alone, which is inconvenient."

Requests

1. "Please let me know which hospitals have specialists in the department I need."
2. "If there are any well-known hospitals, please recommend them."
3. "Please assist me in ensuring that I can receive medical treatment without any difficulties, even if I go to the hospital alone."

Let's create a medical information app for international students!

- 1 Making it easy to find hospitals with specialists
- 2 Allowing you to discover highly-rated hospitals
- 3 Enabling you to visit the hospital alone

Main Features

Symptom-Checker

Diagnosing illnesses

Department

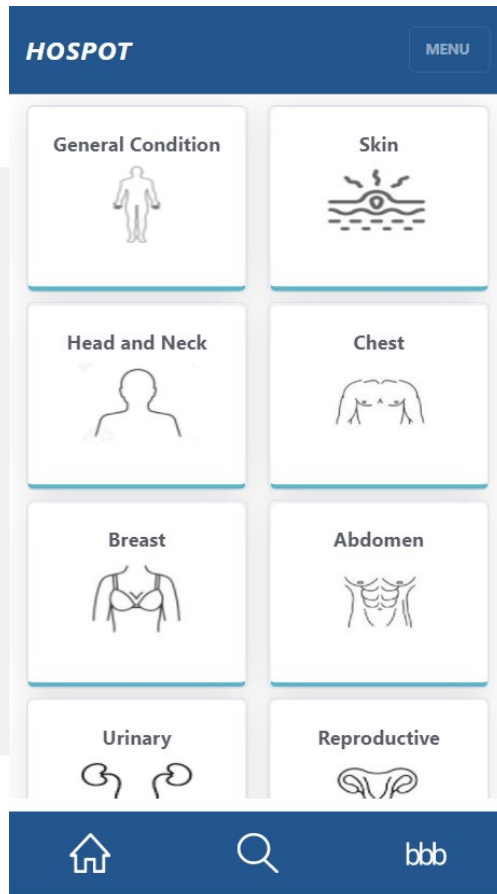

Providing hospital
information by department

Future Plans

1) Add Hospital Rating Feature:

Accumulated review data can offer higher quality information

2) Expand from Daejeon to Nationwide:

Develop into a platform that can assist all international residents across Korea
